

Home & School CONNECTION[®]

Working Together for School Success

East Broadway Elementary School
Jeanmarie Wink, Principal

SHORT NOTES

Picture this

Good readers form mental pictures as they read. To improve your child's comprehension, read a book without letting him see it. Then, ask him to guess what the illustrations look like. *Examples:* How are the characters dressed? Is the setting bright or gloomy?

Be there!

Regular attendance in elementary school sets up a good pattern for your youngster's entire school career. Show your child that school comes first by trying to keep days off for illnesses and family emergencies. Also, schedule routine doctor and dentist appointments for after school or over school breaks.

Line them up

Sometimes kids get math problems wrong simply because they haven't lined up the numbers correctly. Try this. Have your child work problems on graph paper, using one box per number. Once she gets used to this system, she'll be able to transfer her lining-up skills to regular paper.

Worth quoting

"Kind words do not cost much. Yet they accomplish much." *Blaise Pascal*

JUST FOR FUN

Teacher: Name one important thing we have today that we didn't have 10 years ago.

Brian: Me!

Pitching in

Would you like your child to be more responsible, hardworking, and persistent? Here are ideas for working as a family to help your youngster develop these important traits.

A group approach

Thinking of herself as a "team player" can encourage your child to be responsible. Explain that your family operates as a team. Everyone must play a part to get things done. *Example:* You take her shopping for her clothes and sports equipment. She chooses her outfit each morning and keeps track of her hat and glove.

Hard workers wanted

Your youngster probably has regular chores to do. You can motivate her to work extra hard by placing "want ads" on the refrigerator. Choose a challenging job, and offer a benefit. *Example:* Wanted—a hardworking family member to clean

out a corner of the basement. Reward—a place for your child and her friends to play.

Sticking it out

Working toward small goals can make it easier to complete a big task. Perhaps your family room needs a fresh coat of paint. Write down the steps (move furniture and lay down drop cloths, prepare walls, roll paint on walls, paint trim). Tell your child you'll take a fun break after each step is done (go to the playground, take a bike ride).♥

Parent power

There are many ways you can support your child's learning and school. Here are a few ideas:

- Spend a few minutes every evening looking over handouts your youngster brings home. Fill out forms to return the next day.
- Tell your child's teachers if you can help them out at school or home.
- Make sure teachers know you appreciate their efforts. From time to time, send a thank-you note or an email.
- Contact your youngster's teacher immediately if you see a problem. Working together will help your child succeed.
- Attend conferences, parent meetings, and school events regularly.♥

Standardized tests

Choose to do well

True or false: standardized tests are tough. The answer depends on how prepared your youngster is. Here are four ways to help him handle test week:

1. Explain that the tests will show how much he has learned. Encourage him to try his best, but don't put so much emphasis on them that he feels stressed.
2. Practice the test format. For example, your child might have to read a paragraph and answer questions. Using one

of his textbooks, have him look at the questions at the end of a section first and then read the passage. That will help him know what to read for and how to find the answers.

3. Limit activities the night before tests. You may want to avoid having guests for dinner or skip his brother's baseball game if it means being out late. Be sure your child gets to bed on time and sets an alarm for the next morning.
4. On test day, give him an energy-boosting breakfast. Try to include both protein (eggs, yogurt, milk) and carbohydrates (fruit, oatmeal, toast).♥

ACTIVITY CORNER

Paper bag city

Let your child create her own 3-D community. She'll practice map skills and learn about urban planning as she decides where to put the buildings in her town.

Materials: paper lunch bags, newspapers, crayons or markers, black construction paper, scissors, tape

Have your youngster think of buildings to include,

such as a bank, a grocery store, a school, a library, and houses. She can make them by drawing doors, windows, and signs on flat bags (on the side without the flap). For every bag she decorates, have her stuff a second one with newspaper. Then, she should open each decorated bag and slide it over a stuffed bag so her "buildings" will stand up. For the roads, she can cut black construction paper into strips and tape them together.

Finally, have your child lay out her roads and arrange her buildings alongside them to make her very own town.♥

Q & A

Bullying: The bystander's role

Q: My child came home from school upset because kids were picking on a classmate and wouldn't let her play with them. What advice should I give my daughter?

A: Tell your youngster that her classmate was being bullied—and that she may be able to help stop it!

There are several things she can do. If she feels safe, she could say something like, "That's not nice," and then walk away. She might invite the child who is being bullied to join her in a game or school project.

Also, remind your youngster to report bullying to a teacher or other adult when she sees it. Let her know this is not tattling, but a way to help someone who is being hurt. You can explain: "Asking an adult to help a child who is being bullied is like asking the nurse to help a child with a scraped knee."♥

PARENT TO PARENT

Thinking games

Between school, errands, and activities, my family spends lots of time on the go. I decided to use some of it for "thinking games."

I taught my kids a game my parents used to play with me, called "Would You Rather?" I offer two options and ask which they prefer and why. For example, I might say, "Would you rather live near the beach or the mountains?"

My son came up with a game he named "Three Favorites." Someone picks

a category (outfits, movies), and we all tell our top three choices. My daughter thought of "What Doesn't Belong?" We take turns naming items and asking the others to explain which is the odd one out and why. The kids especially like this game because there can be more than one "right" answer. For example, when I named "owl," "ostrich," and "eagle," my daughter said, "Ostrich, because it can't fly." My son's answer was, "Owl, because it hunts at night."

Now they want to play all the time. I'm glad because we're having fun—and they've gotten better at thinking through their ideas.♥

OUR PURPOSE

To provide busy parents with practical ideas that promote school success, parent involvement, and more effective parenting.

Math+Science Connection

Intermediate Edition

Building Understanding and Excitement for Children

East Broadway Elementary School
Jeanmarie Wink, Principal

INFO BITS

Open-door angles

Doors in your house are the perfect place for hands-on practice with angles. Take turns opening or closing a door and asking, "Acute, right, or obtuse?" Partially open a door, and it's an acute angle. Open it straight out, and it's a right angle. Open it wider, and it's obtuse.

Habitat for rent

Help your child think about what animals need to survive (shelter, food, water). Then, have her choose an animal (monkey) and write a classified ad for a home that will meet its needs. *Example:* "Tall tree in a tropical rain forest. Large river nearby for drinking. Plenty of leaves, fruit, and insects to eat."

Book picks

■ *The Man Who Counted: A Collection of Mathematical Adventures* (Malba Tahan) combines an adventure story with interesting math puzzles.

■ Learning about the solar system is fun when planets tell the story themselves. Dan Green's *Astronomy: Out of This World!* contains fascinating facts and details along with cartoon illustrations your youngster is sure to love.

Just for fun

Q: What has three feet but no legs or arms?

A: A yard.

Fractions of fun

Understanding fractions is much easier when your child can visualize them. Here are ideas to help her see—and use—fractions.

Keep a diary. Show her that fractions are a part of everyday life. For a week, have her record and illustrate each one she notices. For instance, she might write, "We had a half day of school today," or "Mom asked for $1\frac{1}{3}$ pounds of turkey at the store." How many examples can she find and draw?

Play a game. Have each player cut a sheet of construction paper into six horizontal strips. She should leave the first one whole and then cut the second one in half (fold it, and cut along the fold), and the others into thirds, fourths, sixths, and eighths. With bits of masking tape, label a die: $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{6}$, $\frac{1}{8}$, and "wild." To play, roll the die, and lay the matching

piece of paper on your whole strip (for "wild," choose any piece). The goal is to be the first one to fill your strip without overlapping any pieces (*example:* $\frac{1}{2} + \frac{1}{4} + \frac{1}{4} = 1$ whole strip).

Put in order. Together, make a set of fraction cards, with one fraction per index card ($\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$, $1\frac{3}{4}$, 2). Shuffle the cards, and see how quickly your youngster can put them in order. Then, while she closes her eyes, lay the cards in order but leave out a few. Give her the missing cards, and have her put them where they go. 🎲

Look at me!

Help your youngster learn about the science of optics with this mealtime activity.

Have him look at himself in a clean spoon. What happens if he looks in the bowl of the spoon? (He's upside down.) What happens on the other side? (He's right side up.)

Next, have him bring his finger toward the spoon and watch what happens on each side. The bowl (the *concave* side) will magnify his finger, or make it look larger. The back (the *convex* side) will make his finger look smaller. Ask your child how scientists might use this information to make eyeglasses, cameras, or telescopes.

Tip: He can remember which side is which by thinking of concave as "caves in." 🎲

Multiply and divide

Learning to multiply and divide can be more about *thinking* than memorizing. Strategies like these can help your child practice.

Make it fun

Practice using toys or food. If your child collects toy animals, you might ask, "How many legs do 4 horses have?" He can "skip count" the legs by 4s (4, 8, 12, 16) to see that $4 \times 4 = 16$. If he has 17 pretzels and wants to give 3 friends an equal amount, he can "deal them out." He'll see that each person gets 5, and there are 2 left over. ($17 \div 3 = 5$, remainder 2)

Use what you know

Encourage your youngster to look for clues to help him solve problems. For 8×7 , he could consider other facts he knows. "I know 4 groups of 7 = 28. I need 8 groups, so I can double that answer.

If $28 + 28 = 56$, then $8 \times 7 = 56$." For $30 \div 5$, he might say, "I know $10 \div 5 = 2$. There are three 10s in 30, and $3 \times 2 = 6$. So $30 \div 5$ must be 6." 

Q & A Ask math questions

Q: I've never felt comfortable with math. How should I talk to my children about what they're learning in math class?

A: Try to show enthusiasm for what your youngsters are doing in math. You might ask them each day at dinner or homework time: what they studied in math that day. Let them explain the concepts they're working on, and follow up with questions. For instance, if they're learning about decimals, you could ask how decimal points are used in money (they separate the parts of a dollar from the whole dollar).

Then, when your children finish their homework, have them show you how they solved a few problems. As they explain their methods to you, they'll be reinforcing their own skills. And they'll be proud to be teaching you something! 

MATH CORNER

Find, build, compute

What do a shoebox, book, and refrigerator have in common? They are all rectangular prisms, or solid shapes with rectangles for their faces (sides). Encourage your child to explore geometry with this common shape.

Volume. Let her build a rectangular prism out of dice, sugar cubes, or same-sized Legos. Her model should be solid, with no hidden spaces. When she finishes, have her figure out the volume (count the cubes along the height, width, and length, and multiply the three numbers together). To check her math, she can take apart her structure and count all the cubes.

Dimensions. Give your youngster 36 blocks, and see how many different sizes of rectangular prisms she can build. Have her record dimensions of each one. *Examples:* $2 \times 2 \times 9$ and $2 \times 3 \times 6$. What do the sets have in common? (Each product equals 36.) 

SCIENCE LAB

Save your breath

Your youngster can inflate a balloon without using his breath. A chemical reaction will do the job for him!

You'll need: empty plastic soda bottle (20 fl. oz.), $\frac{1}{4}$ cup water, 1 tsp. baking soda, uninflated balloon, lemon juice

Here's how: Have your child add the water and baking soda to the bottle, close the cap, and swirl it around until the water is cloudy. Then, help him stretch out the

balloon and place the opening over the top of the bottle, leaving a small space. He should very quickly add a little lemon juice, seal the balloon completely over the bottle, and shake lightly.

What happens? The balloon inflates.

Why? When you mix an acid (lemon juice) with a base (baking soda), they create carbon dioxide. The molecules spread out as the gas forms, pushing against the walls of the balloon and causing it to inflate. 

OUR PURPOSE

To provide busy parents with practical ways to promote their children's math and science skills.
